Preface

Biomedical research is at a critical point at present. The research has led to an enormous amount of data and models describing these data, but approaches for application, formalization and integration of this knowledge from the molecular to the system level are still topics of ongoing research and certainly far from fully developed.

Also in cardiology the different anatomical and physiological constituents as well as the coupling between them are being researched in increasing detail and are often described using computer-based models. But for this domain an integrative framework is still missing.

The application of computer-based modeling as a research, development and clinical tool often necessitates the coupling of various models from different levels. Describing the interactions between these models, which are both physically sound and computationally efficient, determines the applicability of such promising computer-based attempts.

My hope is that this book will contribute to the comprehension, spread and impact of computer-based modeling in cardiology, both from a teaching point of view and by summarizing knowledge from several, commonly delimited topics relating to the cardiac manifoldness.

The book evolved from revision and extension of my professorial dissertation (Habilitationsschrift) “Mathematical Modeling of the Mammalian Heart” written in 2002. This dissertation was based on notes for the lectures “Computational Biology: Bioelectromagnetism and Biomechanics,” “Simulation of Physical Fields in the Human Body,” and “Anatomical, Physical and Functional Models of the Human Body,” which I gave at the Universität Karlsruhe (TH) from 1998 to 2003.

Salt Lake City, 1 February 2004

Frank B. Sachse

Acknowledgement

Many people merit my gratitude for their assistance and support in this work. I appreciate the scientific opportunities offered by the Institut für Biomedizinische Technik at the Universität Karlsruhe (TH), Germany, and the Nora Eccles Harrison Cardiovascular Research and Training Institute at the University of Utah, USA. Prof. Dr. Olaf Dössel, Prof. Dr. Karsten Meyer-Waarden and Prof. Dr. Bruno Taccardi provided me with an excellent platform for my ‘hobby.’

I am thankful that this work has been supported by the Richard A. and Nora Eccles Fund for Cardiovascular Research and awards from the Nora Eccles Treadwell Foundation as well as several funds from the Deutsche Forschungsgemeinschaft. Also, I am grateful to the Rechenzentrum at the Universität Karlsruhe (TH), particularly Rolf Mayer, and the Scientific Computing and Imaging Institute, University of Utah, which made the necessary computing and visualization resources available.

Particularly, I want to express my gratitude to Leo Blümcke, Rotraut Frech, Matthias Mohr, Prof. Dr. Carlos Sansour, Gunnar Seemann, Dr. Jeroen Stinstra, and Oleg Skipa for their numerous comments and proof-readings of this work. A large thanks must be given to Dr. Christian Werner with whom I enjoyed working for more than 5 years. Many highlights of our project wouldn’t have been possible without his various contributions. I’d like to extend this gratitude to Dr. Ingo de Boer, Nils H. Busch, Heiko Jausel, Rong Liu, Steffen Mang, Claudia Riedel, Manfred Schroll, Lars Thomas, Daniel Weiß, Markus Wolf and many students who influenced this work significantly. Further thanks go to Matti Stenroos from Finland as well as Nuno Sa Couto and Sergio Barros from Portugal, who not only added some international flavor, but also provided important contributions.

I’m grateful to my parents, my brother Jochen and nephew Jan, because they demonstrated that there are important things in life other than work. My friends Reza and Dawud deserve special thanks for not losing patience even though I neglected so many of our appointments. Finally, a huge thanks to Denise, who not only tolerated my particularities resulting from this work, but also encouraged and supported me in the best possible manner.

Contents

Preface	V
1 Introduction	1
1.1 Motivation	1
1.2 Organization	3
2 Mathematical and Numerical Foundation	5
2.1 Overview	5
2.2 Einstein Summation Convention	6
2.3 Tensor Algebra	6
2.4 Numerics of Systems of Linear Equations	9
2.4.1 Definition	9
2.4.2 Direct Methods	10
2.4.3 Iterative Methods	12
2.4.4 Singular Value Decomposition	20
2.5 Numerical Integration of Functions	21
2.5.1 Definition	21
2.5.2 Trapezoidal Rule	22
2.5.3 Simpson's Rule	22
2.5.4 Gauss Quadrature	23
2.6 Numerics of Ordinary Differential Equations	23
2.6.1 Definition	23
2.6.2 Euler Method	24
2.6.3 Runge-Kutta Method	25
2.7 Numerics of Partial Differential Equations	27
2.7.1 Definition	27
2.7.2 Initial Values and Boundary Conditions	29
2.7.3 Finite Element Method	30
2.7.4 Finite Differences Method	43

3	Theory of Electric Fields	49
3.1	Introduction	49
3.2	Physical Laws	50
3.2.1	Maxwell's Equations	50
3.2.2	Poisson's Equation for Stationary Current Fields	51
3.2.3	Electromagnetic Properties of Biological Tissues	52
3.3	Numerical Solution of Poisson's Equation	57
3.3.1	Finite Element Method	57
3.3.2	Finite Differences Method	63
4	Theory of Continuum Mechanics	69
4.1	Introduction	69
4.2	Definitions and Physical Laws	70
4.2.1	Deformation Gradient	70
4.2.2	Strain Tensors	73
4.2.3	Stress Tensors	74
4.2.4	Stress Equilibrium	75
4.2.5	Constitutive Relationships	78
4.3	Numerical Solution	83
4.3.1	Principle	83
4.3.2	Interpolation via Shape-Functions	84
4.3.3	Determination of Element Equations	87
5	Digital Image Processing	91
5.1	Overview	91
5.2	Digital Representation of Images	92
5.3	Preprocessing	93
5.3.1	Overview	93
5.3.2	Transformation of Coordinates	93
5.3.3	Filtering Methods	98
5.4	Segmentation Techniques	102
5.4.1	Introduction	102
5.4.2	Thresholding	103
5.4.3	Region Growing	104
5.4.4	Watershed	105
5.4.5	Deformable Models	106
5.4.6	Manual Methods	112
5.5	Principal Component Transform	112
5.6	Texture Orientation	115
5.6.1	Introduction	115
5.6.2	Detection and Assignment	115
5.6.3	Interpolation	117

6	Cardiac Anatomy	119
6.1	Overview	119
6.2	Microscopic Structures and Molecular Organization	121
6.2.1	Myocytes	121
6.2.2	Gap Junctions	131
6.2.3	Connective Tissue Structures	133
6.3	Macroscopic Structures	134
6.3.1	Ventricles	134
6.3.2	Atria	137
6.3.3	Blood Vessels	139
6.3.4	Valves	139
6.3.5	System of Excitation Conduction and Initiation	140
6.3.6	Nervous System	141
6.4	Modeling of Anatomy	142
6.4.1	Overview	142
6.4.2	Analytical models	142
6.4.3	Imaging Systems and Data Sources	144
6.4.4	Modeling of Orientation and Lamination of Myocytes	145
6.4.5	Models from the Visible Human Project	146
6.4.6	Models from Magnetic Resonance Imaging	152
7	Cardiac Electrophysiology	157
7.1	Overview	157
7.2	Cellular Electrophysiology	158
7.2.1	Experimental Studies	158
7.2.2	Modeling of Cellular Components	164
7.2.3	Models of Cardiac Myocytes	171
7.3	Excitation Propagation	189
7.3.1	Experimental Studies	189
7.3.2	Modeling Approaches	194
7.3.3	Cellular Automata	195
7.3.4	Reaction Diffusion Systems	203
7.3.5	Comparison of Macroscopic Models of Excitation Propagation	214
